LinearFocus™ Maintenance Management System

LinearFocus™ enterprise asset management (EAM) software helps rail properties manage the right-of-way including: inspections, defect recording and repair of rail track, signals, switches, catenary, and electric traction. LinearFocus™ records critical data in a powerful database, giving users immediate access and enabling them to make key decisions about maintenance practices, capital improvement, train scheduling, and rail operations throughout the entire system.

The stakes of effective right-of-way asset management are high. Reliability and safety of the rail corridor are crucial when providing transit services to the public. Rail properties must strike a balance between maximizing safety and adhering to regulatory standards while developing innovative solutions to lower maintenance costs and to assure maximum asset availability.

Deploying an integrated enterprise asset and maintenance management solution for the right-of-way can significantly improve an organization's operation and achieve increased safety, improved access to decision tools, enhanced regulatory compliance, and reduced in costs.

More than 450 diverse customers, including more than 80 public transportation properties, use AssetWorks' EAM software for their transportation assets. With the largest client base of any EAM provider specializing in transportation assets, AssetWorks is the leader in public transportation. Leveraging the latest technology in software and wireless mobile computing, AssetWorks software and industry expertise help our customers better utilize resources, improve service delivery, and achieve substantial and measurable cost savings. The challenges of meeting goals with fewer assets or managing more assets with fewer resources has become commonplace for today's transits. AssetWorks provides the total solution—software, services, and support—to get the job done.

Benefits You Can Count On

- Eliminate unnecessary maintenance procedures based on asset condition and history
- Eliminate paper processes and gain access to information
- Establish more effective preventive maintenance cycles
- Better manage direct and vendor labor
- Understand actual cost to inspect, maintain, and repair right-of-way
- Improve maintenance and condition data to enhance asset replacement and disposal plan
- Reduce outdated spare parts
- Decrease maintenance overtime
- Reduce comeback or repeat work

Features

- Coordinate of inspection, defect tracking, work planning, and work order processes
- Organize work plans between maintenance groups that handle right-of-way safety to decrease track downtime
- Increase availability of the right-of-way, which allows the rail property to respond to and take advantage of off-peak service opportunities
- Create efficient processes for parts and inventory orders
- Process warranty claims

LinearFocus™: A Comprehensive Software Solution for the Right-of-Way

LinearFocus™, a complete asset and maintenance management application, extends the useful life of assets while allowing a rail organization to improve how it manages operational expenditures. LinearFocus™ ensures that maintenance-of-way supervisors have the tools and data to efficiently manage inspections, as well as routine and defect maintenance, and to direct long-term projects.

LinearFocus™ gives users the power to make key decisions about planned track outages, train scheduling, and operations throughout the entire system. LinearFocus™ provides other information and solutions for maintenance-of-way users, such as:

- Real-time tracking of employee labor
- Robust inspection functionality
- Handheld mobile data capture software
- Parts and materials management
- Planned and predictive maintenance scheduling
- Integration with enterprise financial systems for consolidated reporting on assets, expenditures, and operations activities
- Integration with Trapeze applications

Mobile Inspection and Defect Reporting

The AssetWorks suite of mobile applications, MobileFocus™, provides mobile technicians and inspectors with system access when they are in the field, including:

- Entry of track and asset inspections, including reference location information
- Real-time defect reporting
- Review of previously entered defects
- Real-time labor tracking for work-related and inspection-related activities
- Review of maintenance and inspection history for all assets
- Entry of diagnostic test results

All data stored on the MobileFocus™ device may be uploaded to the AssetWorks database in real-time using a wireless network or in batch mode when the technician returns to the maintenance facility.

A Total Solution

LinearFocus™ is the most functionally and technologically advanced maintenance management platform available today. AssetWorks is the only vendor to provide enterprise asset management in one application to meet a rail property's needs, including:

- Linear asset maintenance management of rail tracks, structures, signals, catenaries, and power
- Maintenance administration for rail rolling stock and support equipment
- Facilities maintenance supervision
- Rail operations management for commuter rail
- Incident management
- Mobile technology for inventory management, vehicle functionality, and maintenance-of-way functionality
- Materials inventory, purchasing, and rebuild functionality
- Real-time integration to back-office systems
