

AssetWorks Options for Mobile Computing

Internet Devices	AiM Mobile	AiM mDesk	AiM iDesk
Full application feature set. Requires internet connection and browser	PDA based solution for the untethered user. Uses Windows Mobile OS	Runs on J2ME enabled phones	Runs on iOS, iPhone, iPad, iPod Touch

In the facilities management world there are many types of users. Whether you are an HVAC Technician, a Trades Supervisor or a Director of Facilities, the right tool is essential to making your job easier. That's why we offer several alternatives - because each user has different needs.

Mobile computing solutions from AssetWorks allow users to access the system in the field, eliminate duplicate data entry errors, and save a few trees by reducing the amount of printed work orders.

With **AiM Mobile**, users can download their work for the day and then manage time cards, inventory transactions, work orders and preventive maintenance tasks in the field, all from their handheld PDA. At the end of the day, or at anytime in between, the user can dock the PDA to its cradle to synchronize data and download new work orders.

This synchronization can also be done via wireless or cellular networks, depending on availability.

With AiM **mDesk**, J2ME enabled cell phones can communicate with the system. Users can manage work orders, view daily assignments, and enter timecards.

With portable **Internet Devices**, users can access the entire AiM application. By using an appliance that has a browser and a live internet connection, users can enter timecards, run reports, check schedules, view CAD drawings, enter data and have the complete application at their fingertips.

iDesk is a fast, purpose-built native application for Apple mobile devices, with the ability to navigate anything in AiM by utilizing the integrated browser. iDesk runs on iPhone, iPod Touch and the iPad.

Enterprise Asset Management

AiM™ Mobile

Key advantages:

- Operates in disconnected mode
- Long track record of success
- Support for bar coding
- Many hardware options

Parameters:

- Designed as a synced solution
- Limited data set

Recommended Users:

- Users performing planned work
- Inventory release and physical counts

AiM™ mDesk

Key Advantages:

- Streamlined interface for small screen size
- Real time viewing and updating data
- Runs on J2ME devices

Parameters:

- Must have connectivity
- Limited functionality set

Recommended Users:

- Field worker receiving dispatched work, access to timecards and work orders

AiM™ on Internet Devices

Key advantages:

- Full application availability
- Real time viewing and data updating
- CAD/GIS viewing
- Reasonable hardware options

Parameters:

- Must have connectivity

Recommended Users:

- Users requiring broad AiM functionality

AiM™ iDesk

Key Advantages:

- Interface optimized for the iOS
- Full application availability

Parameters:

- Must have connectivity
- Runs on iPhone, iPod Touch and iPad

Recommended Users:

- Users requiring broad AiM functionality
