

AiM™ FAS - Asset Inventory via AssetMobile

AiM FAS is a powerful and flexible fixed asset solution for government, higher education, K-12 and commercial organizations. AiM FAS was developed and field tested by actual asset inventory professionals with more than 20 years of on-site experience and over 5,000 individual clients served.

AiM FAS is an all-in-one system for managing fixed assets that includes:

- Asset Accounting
- Asset Reporting
- Asset Inventory via AssetMobile

All functions of the AiM FAS system work seamlessly together resulting in a comprehensive and intuitive user experience. Regardless of your current situation or needs, AiM FAS can be installed and implemented to help your organization meet its fixed asset management goals and requirements. AiM FAS works for:

- Organizations in need of a stand-alone fixed asset management system
- Organizations interested in a more user friendly fixed asset management solution to coincide with their existing ERP system
- Organizations currently using our AiM Facilities Management System that would like to add fixed asset functionality

Easy asset maintenance and overall system navigation are the cornerstones of the AiM FAS design.

Asset Mobile

Asset Inventory via AssetMobile

With over 20 years of fixed asset data collection and reconciliation experience, AssetWorks has married software functionality with smart hardware technology. Easy data capturing methods and full mobile database capabilities are the cornerstones of the AssetMobile software design. In addition to its data reconciliation capabilities, AssetMobile gives users the ability to capture tags via barcode scanner, HF RFID, UHF RFID, as well as manual entry. AssetMobile is the most flexible and accurate asset reconciliation software available in the fixed asset industry.

AssetMobile is our licensed Mobile software for use with multiple operating systems. AssetMobile enables users to import data directly from their AiM database, collect their field information and verify existing assets, and update their AiM fixed asset database using this efficient and smart tool.

Enterprise Asset Management

Our AssetMobile software features are conducive to an accurate and efficient data reconciliation process by streamlining re-inventory workflow processes. These features make it easier for the end user to conduct and review their re-inventory tasks. Below are just some of the features you get when using AssetMobile for your fixed asset data collection needs.

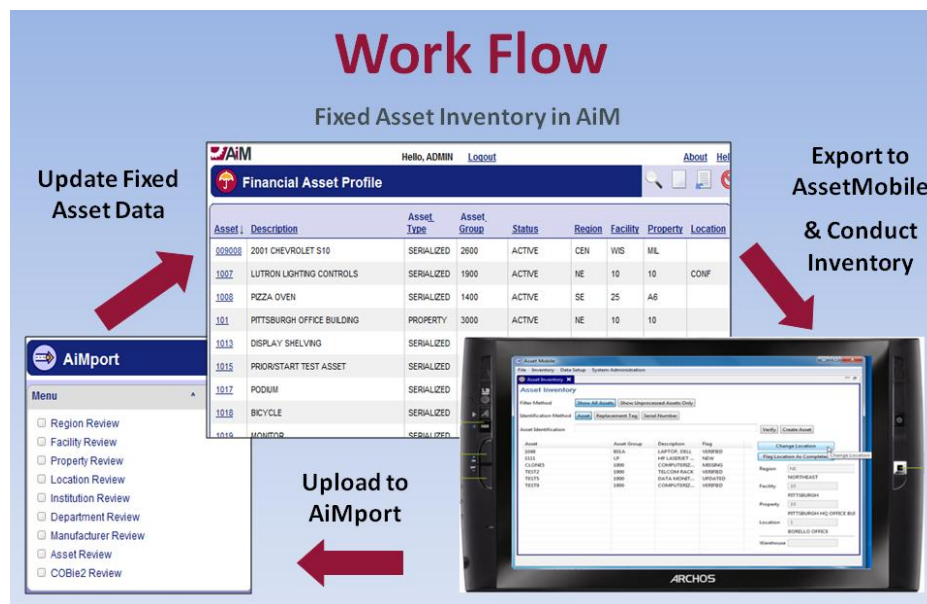

- Reconcile missing assets on site.
- Fully compatible with AiM or AssetMAXX
- Supported software license with periodic software updates and tech support.

AssetMobile Features

- Download and view your fixed asset inventory.
- Add new assets on the fly, capturing all relevant data measures.
- Transfer assets from one location to another in one step.
- Reconcile assets based on tag number, serial number, or asset ID.
- Conduct your re-inventory filtered by location or asset custodian.

AiMport

Once the fieldwork has been collected, or nightly as a backup, the re-inventory data is uploaded to the AiMport module in your AiM database. AiMport collects the data in a holding area and displays the changes to be accepted or rejected by the user. Asset additions, changes in location, changes in department, fund, custodian, or a number of other data points, are displayed for comparison, and if accepted, are incorporated in your AiM database. Transactions such as department, fund, or location transfers, when accepted, automatically generate entries in the appropriate history table for audit trail purposes.
