

EAM

Challenges

Public Works Directors struggling to justify an increased budget. Work crews being unable to enter work order or service request information on-the-go. Analysts spending weeks calculating capital costs.

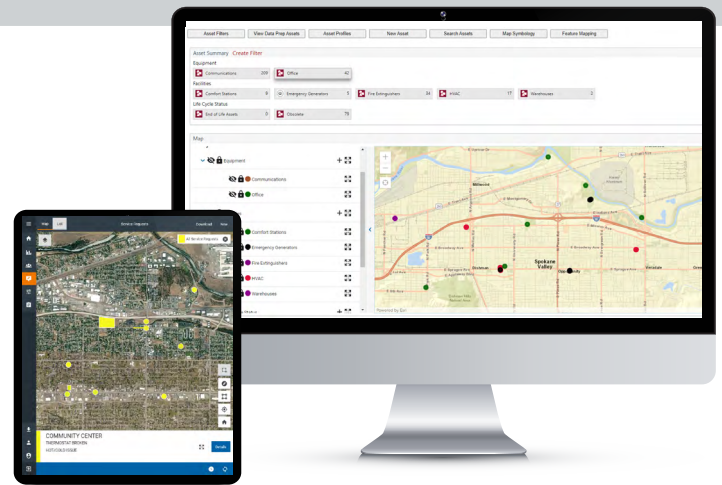

Solution Overview

AssetWorks EAM is a web-based and fully integrated solution designed to manage all assets and maintenance in one system. Our integrated approach removes the use of multiple programs for different asset types, thereby saving time for staff and streamlining overall operations.

The all-encompassing view within AssetWorks EAM allows for complete lifecycle management and extensive reporting functionality for all assets without sacrificing security or autonomy. It is a completely scalable solution that manages unlimited assets of any type and unlimited users. The intuitive, user-friendly system supports extensive workflows and functionalities to make the users' lives easier.

Key Features

- **Asset Management** – Lifecycle management, Historical tracking, Notifications, Preventive Maintenance and Inspections, Mapping Functionality
- **Geographic Information System (GIS) Integration**
- **Capital Planning**

- **Reporting and Analytics** – Standard Reports, Ad-Hoc Reports, Dashboards and KPIs

Benefits

Manage your assets (all of them!)

Whether your assets are point, linear, or boundary-based, AssetWorks EAM helps you manage their entire lifecycle, including maintenance schedules, inspections, parts/materials requests, and location.

Work smarter

No matter the job, EAM manages it from start to finish. EAM supports the planning, tracking, and completion of scheduled and unscheduled work.

Understand your data

As an Esri partner, EAM offers out-of-the-box GIS integration, which automatically synchronizes in near real-time through bi-directional connection.

Make data-backed predictions

With EAM's Asset Performance Assessment, you can see into the future of your assets and make smart decisions based on maintenance and performance through condition scores.
