DRIVER IDENTIFICATION

Enhancing Accountability,
Safety, and Efficiency

AssetWorks GPS Bluetooth ID Tag allows management teams to accurately associate drivers with vehicle usage, facilitating accountability and enhancing security measures. This technology enables precise tracking of individual driver behavior, allowing for tailored coaching and training programs to improve overall fleet safety and efficiency.

Key Features:

- **Seamless, automatic driver identification**
- **No need for external card readers**
- **Driver input no longer required**

Maintaining a clear record of driver activity is a requirement in fleet management. From handling tickets to responding to accidents or unforeseen incidents, the ability to swiftly identify who was behind the wheel and when is crucial. This not only helps with vehicle monitoring but also ensures accountability, empowering fleet operators to address incidents effectively and uphold safety standards throughout each driver's shift.

? Do you want to track individual driver behavior to improve your fleet's safety and efficiency?
