

Asset Analytics Platform

Challenges

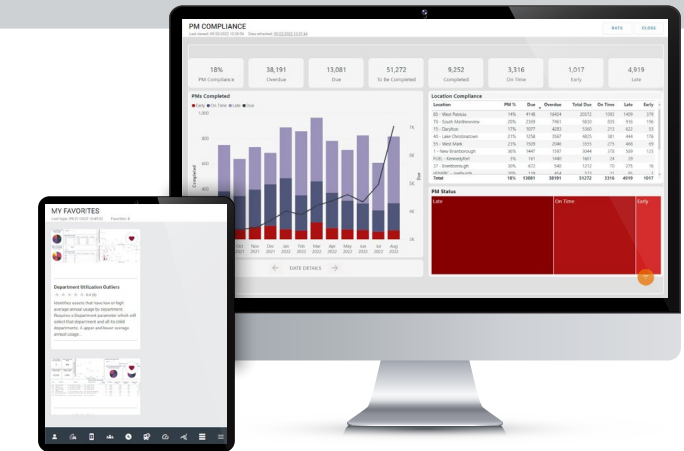

Fleet management is becoming increasingly data-driven, with technology like connected vehicles, telematics, and in-vehicle AI generating more data than ever before across all areas of fleet operations.

Solution Overview

The AssetWorks Asset Analytics Platform is a cloud-based solution consolidating internal and external asset data sources to deliver next generation business intelligence content, stand KPI/metrics, visualization, and self-service reporting so fleets can make data-driven decisions. The platform offers the interactive features required of modern fleet and asset managers to take full control of their data.

Key Features

- Out-of-the-box standard content, including industry standard KPIs and metrics
- Interactive dashboards with next generation visualizations in a secure portal
- Built with industry-leading Azure Cloud database and data analysis applications
- Seamless data movements through APIs from customer's data source to cloud data lake
- Data housed in secure, customer-specific data warehouse
- Accessible from desktop or tablet

Benefits

Simplify and modernize reporting

Deploy industry standard KPIs with simple configurations, with direct access to data for self-service reporting

Save time

Save hours of time building and maintaining your own reporting environment and reports with an easy-to-use navigation

Bring data together

Consolidate data from multiple sources into a single reporting platform

Build a culture of innovation

Dynamic and interactive reporting, visualizations, and analyses drive excitement throughout the fleet organization
