

Challenges

Unsure of whether to repair or replace a vehicle. Spending weeks calculating lifecycle costs. Maintaining multiple spreadsheets of vehicle and asset data.

Traditional maintenance management software tracks assets at a basic level, focusing only on assets as they are added or removed from the system, but omitting the data involving procurement, maintenance, and disposal processes. There is immense value in that omitted data, as every aspect of asset lifecycles go into the generation of long-range replacement forecasts.

Solution Overview

AssetWorks CAM is a web-based asset replacement solution capable of tracking replacement schedules on unlimited assets. With CAM, lifecycle cost analysis has never been easier.

CAM is comprised of four primary modules that address the major functional areas of capital asset management: Analytics; Planning & Budgeting; Procurement; and Disposal.

Key Features

- **Analytics** – Lifecycle modeling, asset analysis, maintenance forecasting, reports and custom analysis
- **Planning** – Plan types and forecasts
- **Budgeting**
- **Procurement** – Asset requests/approvals, external asset production, asset receipt and inspection, delivery allocation, internal asset assembly
- **Disposal/Auctions** – Remarketing, settlement, reconciliation
- **Lease data**
- **Vin decoding**
- **Mobile app**

Benefits

Replace your assets at the right time, every time

CAM automates the analysis so you can build procurement, maintenance, and disposal strategies based on real data

See into the future

With CAM, you can forecast maintenance and operating costs along with staffing needs based on asset distribution and age

Spend smarter

Prioritize assets based on funding limits, all while capital budgets are managed for the procurement/replacement, new assets, or contingency assets

Streamline disposal

Manage the disposal of assets through user-defined disposal processes, including setting up auctions and assigning assets to auction lots for sale either internally or externally
