# INVENTORY CATALOG PORTAL

Track more than your  
assets

For any city, county, or public works organization to remain successful, they must track more than just their assets. Most organizations already have systems in place for tracking and storing inventory, but one of the top challenges is how to provide the warehouse's customers with an easy-to-use ordering system that is both user-friendly and intuitive.

**AssetWorks EAM's Inventory Catalog Portal** is designed to allow external and internal customers access to an easy-to-use interface for ordering, tracking, and receiving orders from the warehouse without needing to visit the warehouse in-person.

Key Features:

- **Integration with EAM's Storekeeper Portal** – Inventory personnel can review orders, fill them, and stage them for shipping
- **Real-time updates** – Customers can view where their items are in shipping process and what other orders have been requested from their location, as well as cancel or reorder items
- **Full color parts catalog** – Images of parts can be associated with catalog and made available to specific users

❓ Do you want to save time through reducing errors, phone calls, and unnecessary returns?

❓ Do your customers need access to warehouse inventory?

❓ Would your team appreciate a more visual representation of what's in stock?
