

# FluidFocus

## Challenges

*Non-integrated fleet and fluid management. Inefficient ways to calculate total cost of ownership. Manually tracking dispensed fluids.*

## Solution Overview

**AssetWorks FluidFocus** was designed to accurately track the storage and dispensing of fluids and lubricants in vehicle maintenance facilities. The solution works seamlessly with the FleetFocus fleet management software system.

The robust integration allows technicians to treat consumable goods with the same care and consideration as parts and materials. Dispense events are captured instantly and automatically to eliminate manual data entry and errors. These events and costs are applied to work orders where they are available for all management tasks, including historical reporting. As the consumable inventory is dispensed, the shop inventory is updated in real-time so that fleet managers know when to replenish fluids.

## Key Features

- Designed for easy, flexible use and durability
- Ability to manage multiple fluids across multiple dispense locations in one system
- Easy installation

## Benefits

### Improve efficiency

Saves time and money by accurately tracking and accounting for dispensed fluids

### See into the future

Improves accuracy in calculating vehicle total cost of ownership

### Bring data together

Provides reliable interface with multiple management software programs

### Reduce errors

Measures any type of oil, grease, transmission fluid, or windshield wiper fluid

### Understand data

Multiple report generating options available to track dispenses by user, RO, product, etc.
