

Challenges

Fleet managers being unable to control fuel spend. Fuel managers worrying about fuel access during an emergency. Drivers tracking fuel expenses manually.

Fuel is the driving force of any fleet organization, but, as a mission critical asset, it can be difficult to manage. Unlike other consumable commodities, the price of fuel is hypersensitive to market influence. As a result, fuel is often the most significant expense incurred by a fleet organization and tracking fuel costs and consumption becomes essential to controlling the bottom line.

Solution Overview

AssetWorks FuelFocus is an automated fuel management software system, which includes a sophisticated combination of software and hardware to manage all consumable assets across your enterprise. The system processes the issue, receipt, and transfer of all fuel and fluid consumables, including commercially purchased fuel. When integrated with AssetWorks FleetFocus, all data captured by FuelFocus, including odometer readings and hour meters, can be validated in real-time against values stored in a single, centralized database.

Key Features

- **Manages all metered or pulsed consumables**
 - Gasoline, diesel, propane, CNG, LNG, hydrogen, glycol, and lubricants
- **Supports several identification devices**
 - RF vehicle identification box
 - Proximity keys/cards from HID, Motorola Indala, GE Security, and others
 - Magnetic strip cards
 - Biometrics, Keypad input
- **Flexible system can accommodate**
 - 2-, 4-, 8-, 12- and 16-hose models
 - Mobile truck mounts
 - Unlimited number of fuel islands
 - Unlimited number of vehicles and employees

Benefits

Save Money

Better fuel accountability can translate into fuel consumption savings or up to 15% and reductions in shrinkage of 10-20%

Improve efficiency

The powerful integration between FuelFocus and FleetFocus allows all vital information to be maintained in a single database

Reduce errors

With a single data source, critical fleet information, like tank capacities, fuel transactions, and odometer readings, is always up to date

Understand fuel data

Access to relevant fuel consumption data is available from any workstation on the system and vehicle maintenance data is available at the FuelFocus Island Controllers
