

Charge Management Software

Challenges

Fleet and fuel managers needing to manage electricity usage and costs with the same care and features as liquid fuels to keep costs low and productivity high.

Solution Overview

AssetWorks Charge Management Software (CMS) is a powerful solution designed by fleets and for fleets to integrate seamlessly with AssetWorks FleetFocus and EAM solutions. AssetWorks CMS supports the continuous, real-time management of electricity as a fuel, allowing fleet professionals to manage their entire operations in one, integrated system.

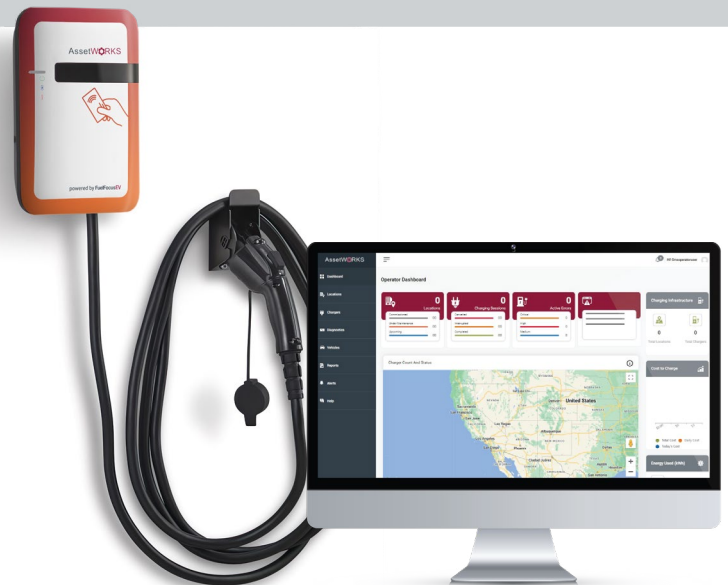

This robust integration allows fleet and facility managers to track electric vehicle charging in tandem with petroleum and other alternative fuel use. Charging session events are integrated automatically to eliminate manual data entry and errors. These events and costs are applied against the asset for internal billing, total cost analysis and other historical reporting.

Software Features

- Vehicle Access Control
- Scheduled Charging and Load Balancing
- Electricity Cost Reporting
- Remote Control and Diagnostics
- Highest level of integration with FleetFocus and EAM
- Can be used alongside other supported charging networks

Hardware Features

- OCCP software can be used on range of hardware
- AssetWorks works with manufacturers to configure software at the factory
- AssetWorks is the one-stop-shop for hardware purchasing, installation, and integration
- Supports Level 2 Charging, DC Fast Charging, and Take-Home Charging operations

Benefits

Reduce electricity costs with load management

See your entire fleet in real-time with fleet designed dashboards

Make changes to reduce charging costs and improve resiliency

Analyze in moments, not hours with out-of-the-box reports to review station health, costs, trends, and more

Break down data silos and use multiple charging networks with CMS and other FuelFocusEV products
