

FuelFocusEV CHARGING TYPES

No matter how or where your fleet charges, AssetWorks can help. AssetWorks FuelFocusEV charge management software can be utilized across a variety of charging infrastructure types.

Level 2 Charging

AssetWorks FuelFocusEV can be used on a range of Level 2 chargers—up to 80amp units for pickups and other light trucks. Chargers can be configured for wall mount or pedestal installation with several cable management solutions available. AssetWorks' preferred hardware options are designed for quick and easy service and operation by fleet users.

DC Fast Charging

FuelFocusEV charge management software can be paired with DC Fast Chargers designed for fleet or other shared use. Modular hardware designs give fleets the ability to install DC Fast Chargers with the speed they require today, and upgrade with new power modules to the speeds they will need next.

Take-Home Fleet Charging (Garage)

AssetWorks take-home chargers can connect via WiFi or cellular service, integrate with FleetFocus and EAM, and are more accurate than telematics solutions for reimbursement.

Take-Home Charging (Public and Apartment Buildings)

For fleet employees that rely on curbside or apartment building chargers, take-home charging costs and data can be brought in using one of the available FuelFocusEV charging network integrations.
