# AssetW⚙RKS | FuelFocusEV
WHAT TO EXPECT

FuelFocusEV's third party integrations provides FleetFocus and EAM users with up-to-date information on charger transactions to manage electricity as a fuel. Charging transaction data flows into existing out-of-the-box fuel reports so that existing management processes and reports can continue to be used.

Timeline

Before a project can begin:
- Version must be updated to v22 in most cases
- One or more chargers must be installed and RFID cards delivered
- The charging network must have the stations configured for fleet use

Kickoff *(1-2 weeks)*
- Add charger information
- Add fuel cards
- Create new fuel type for electricity
- MaxQue Setup (FA/EAM only)

Setup in Test *(1-2 weeks)*
- Apply new Core settings
- Enter interface parameters
- Run interface successfully

Quality Check *(1-2 weeks)*
- Review transactions for any possible issues

Push to Production *(2 weeks)*
- After approval of test results, push to production
- Quality test production setup

Project length can vary based on size of project. Please refer to quote for full terms and project details.
