

# AssetWORKS TELEMATICS CLOUD PLATFORM

**The AssetWorks Telematics Cloud platform** allows your telematics vendor of choice to integrate into your instance of FleetFocus through the cloud environment.

With Telematics Cloud, key data is automatically captured and synchronized between your telematics solution and your FleetFocus solution. This includes:

- Mileage and engine hours – Accurate and timely meter readings ensure your preventative maintenance program is using the most up to date information.
- Trouble Codes – Real-time updates on vehicle trouble code status is provided to FleetFocus, where they can be prioritized with notifications depending on severity. This ensures serious issues are dealt with in a timely manner and avoids vehicle use during situations where continued use could cause further, more costly, vehicle damages.
- Measures – Various measures, from EV state of charge to voltage level, can be captured and stored in the FleetFocus ad hoc database for reporting.
- Location – Provides quick location access of vehicles for maintenance staff who may just want to see if that asset is in the yard and available to work on for repair completion.
