FAST-TRACKING EV FLEET CHARGING

There's a high demand for fleet electric vehicles (EV) charging, but site make-ready can take an average of 6-18 months to complete. That can mean fleets, with EVs already mandated or scheduled for delivery, have to wait. That's where AssetWorks + Pioneer eMobility comes in.

Off-Grid EV Charging, Power & Connectivity

- FleetFocus/EAM integrated
- No permits, electrical upgrades, nor on-site construction
- Future-proof design incorporates renewable fuels and automates refueling
- Temporary or permanent flexible charging units from 30-600+ kW
