

 FleetFocus

# COMMERCIAL & PRIVATE FLEETS

Web-based fleet & equipment  
management built for mixed,  
multi-site operations

FleetFocus centralizes asset and PM management, work orders, shop control, and technician productivity in one platform. It streamlines inventory, parts, billing, and chargebacks while integrating fuel, EV, fluids, and third-party systems through APIs. Mobile tools, reporting, and analytics provide visibility to keep operations efficient.

## The challenge we hear from private fleets

- Disconnected systems create data silos across fuel, GPS/telematics, and motor pool.
- Budget justifications are painful without clear cost allocation by department or asset group.
- Shops juggle PM schedules, recalls, and commercial sublet work while technicians wait on parts and terminals.

## Why FleetFocus

- Save money: Optimize maintenance scheduling, labor tracking, and parts & inventory to avoid unnecessary ownership costs.
- Keep vehicles longer: Enforce effective PM programs and documentation to extend useful life.
- Understand your data: See the complete picture via reports, dashboards, and KPIs.
- Break down data silos: Integrate fuel, EV charging, GPS/telematics, and motor pool via APIs.

✓ Lower total cost to maintain with disciplined PM and parts control.

✓ Higher asset uptime with automation and technician workflows.

✓ Cleaner chargebacks and easier budget conversations.
