

 FleetFocus

# TRUCKING FLEETS

**A single system to run shop operations, control parts, and turn telematics data into action**

FleetFocus brings everything together with telematics-driven maintenance, streamlined work order control for both road and shop, and tools that support technician workflows and safety. It also manages trailers, components, parts programs, warranty and collision recovery, plus fuel, energy, and purchasing controls. Robust reporting, KPIs, and integrations give you the visibility and connections you need to keep operations running efficiently.

## **The challenge we hear from trucking fleets**

- Tractor, trailer and auxiliary equipment tracking is fragmented across systems.
- Breakdowns and vendor repairs complicate costs, warranties, and turnaround times.
- Telematics throws off fault codes, but it's hard to triage and schedule the right work.

## **Why FleetFocus**

- Save money: Tighten PM intervals, labor usage, and parts planning.
- Keep vehicles longer: Standardize inspections and test suites.
- Gain data clarity: Drill from dashboards into unit or component history.
- Break down silos: Combine telematics, fuel/EV, and commercial work.

✓ Fewer surprises via fault-to-workflow automation.

✓ Faster turns with consistent shop calendars, parts visibility, and vendor approvals.

✓ Better cost visibility across fuel, parts, labor, and sublet.
